

➔ How do we win the customers?

District heating and cooling to battle climate change

How do you heat and cool your neighbourhoods?

A complete sustainable and smart DHC solution with renewable energy sources is a major step towards sustainable living.

Users can supply
excess heat back
to the network

The district heating
network is used as
heat storage

Power-to-heat:
excess electricity is
converted into heat

Smart, comfortable and attractive living

Flexible production of heating and cooling

- renewable energy and waste fuels
- waste heat from industry and data centres
- ...with combined heat & power capacity to secure the supply

Optimal energy usage, less wasted energy

- demand response cuts peak consumption
- SmartLiving services control heating

District heating: cleaner heat production and lower CO₂ emissions
